AN/TPY2 Radar Location Index / 🧵

I've audited all the planned and installed THAAD batteries. Each of these include their own radars, an AN/TPY2 AESA GaAs or GaN based X-band extremely high performance portable radar. GaN just means it can take twice the power if you can provide it, giving you way more range but of course glowing like an even brighter target. I will group them in the most logical manner possible.

Let's start with USPACOM.

I'll give you the best known coordinates, the type of radars (most will be GaAs) and the mode of operation, whether it's forward or terminal mode. Terminal mode means it's used to track incoming objects within interception range. Forward mode means it's used to track launches at great ranges. This mode can change without warning, but it will be whatever is publicly known.

Here is the legend for the maps/descriptions:

🟢 Operational: 6 (4 INDOPACOM + 2 CONUS)
🟡 Unknown/Unclear: 6 (1 EUCOM + 2 CENTCOM + 2 Israel + 1 Saudi delivered)
🔴 Struck/Destroyed: 4 (2 UAE FMS + 1 Jordan + 1 Saudi Arabia)
🔵 Under Construction: 6 (Saudi FMS GaN planned deliveries)

Let's go!

USPACOM THAAD installations

There are a total of four batteries in the Asia-Pacific region. All are the older GaAs type T/R modules.

Shariki Air Base, Japan: 40.54°N, 139.94°E
GaAs, Operational, Forward mode 🟢
Kyogamisaki Sub Base, Japan: 35.78°N, 135.22°E
GaAs, Operational, Forward mode 🟢
Seongju, South Korea (D-2 ADA): 35.92°N, 128.22°E
GaAs, Operational, Forward mode 🟢
Andersen AFB, Guam (E-3 ADA): 13.58°N, 144.93°E
GaAs, Operational, Forward mode 🟢

At least this is what we know at the current time.

CENTCOM + EUCOM

This is an enormous list.

Kürecik, Malatya Province, Turkey: 38.95°N, 38.37°E GaAs, Status unknown since Feb 28, Forward mode 🟢
Site 512, Har Qeren, Negev, Israel: ~30.95°N, 34.80°E GaAs, Status unknown — radar may relocate periodically, Forward mode 🟡
Al Udeid area, Qatar: ~25.12°N, 51.32°E GaAs, Status unknown — base struck likely destroyed, reporting focused on AN/FPS-132, Forward mode 🔴
Muwaffaq Salti Air Base, Jordan: ~31.83°N, 37.22°E GaAs, Struck — satellite imagery shows burning debris at radar site, Terminal mode 🔴
Prince Sultan Air Base, Saudi Arabia: ~24.06°N, 47.58°E GaAs, Struck near radar site — extent unconfirmed, Terminal mode 🔴
Israel, location 1: coordinates not public GaAs, Deployed Oct 2024 — combat intercepts Dec 2024 & Jun 2025 — status unclear, Terminal mode 🟡
Israel, location 2: coordinates not public GaAs, Reinforcement battery deployed early 2025 — status unclear, Terminal mode 🟡
Saudi Battery 1 (delivered Sep 2024): location unconfirmed GaN, Delivered — reportedly activated Jul 2025 — deployment site not public, Terminal mode 🟡/ 🔴
Ras al-Ghar, Gulf coast: ~26.98°N, 49.85°E GaN, Planned ~2026, Terminal mode 🔵
Yanbu, western Saudi Arabia: ~24.09°N, 38.06°E GaN, Planned ~2026, Terminal mode 🔵

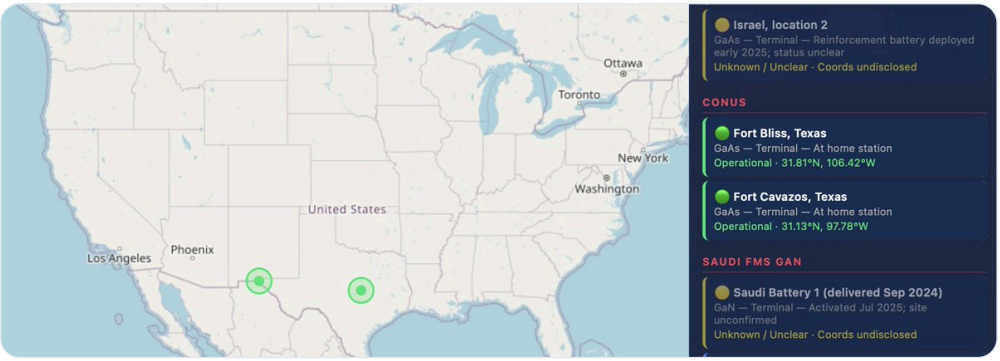
Taif, western Saudi Arabia: ~21.44°N, 40.55°E GaN, Planned ~2026, Terminal mode 🔵
King Khalid Military City, northern Saudi Arabia: ~27.90°N, 45.53°E GaN, Planned ~2026, Terminal mode 🔵
Tabuk, northwestern Saudi Arabia: ~28.38°N, 36.57°E GaN, Planned ~Mar 2027, Terminal mode 🔵
Ras Tanajib, Gulf coast: ~27.86°N, 48.91°E GaN, Planned ~Sep 2027, Terminal mode 🔵

CONUS

Finally, there are two remaining radars at home in the US. These are transportable so can be flown in whenever needed. They usually base a total of 5 radars here, but 3 of them are deployed to USPACOM.

Fort Bliss, Texas (11th ADA Bde): 31.81°N, 106.42°W GaAs, Home station — 3 batteries based, 1 of 3 currently present, Terminal mode 🟢
Fort Cavazos, Texas (35th ADA Bde): 31.13°N, 97.78°W GaAs, Home station — 2 batteries based, 1 of 2 currently present, Terminal mode 🟢

There may be a 6th one based in the US whose location hasn't been announced yet, but it was built in 2025. Given the current active war situation I doubt the US will be forthcoming about that information.



That's a total of 22 radars planned and 16 built, about 2 more than what the media usually claims. It's important to note that China has banned Gallium export to the US which is going to make the construction of the 6 radars planned for Saudi Arabia very difficult.

/End
