I was really afraid of losing my mind due to the volume of things I have read over the last two month, and extended, since December when I refocused on my long term research subjects.
Though I'm sleepless and tired, I now know far more than I did before.
The strangest thing? /🧵

In the past a lot of the things I learnt over the last two month, I took for granted as true without really knowing why.
I learnt all of it over the last two month and connected almost everything I've ever written, with the exception of one important event (9/11).

The cause and effect were seemingly reversed... but why do we believe in cause and effect? What if it's false?

What if the future happens before the past? Does this sound like madness to you?
In physics and philosophy this is called Retrocausality, and it has been confirmed in

all people who possess a certain level of "extra-sensory perception". Here's the repeatable experiment, confirmed by the DIA and CIA:

Have someone guess what is drawn on a paper.
Control: Do not show them what it was after the guess
Experimental group: Show them what it was.

In a perfectly causal system, the latter group should have no distributional difference from the former group. Showing them the answer afterwards cannot affect their answer right? But when measured, the difference is real. And it's repeatable across different setups: Precognition

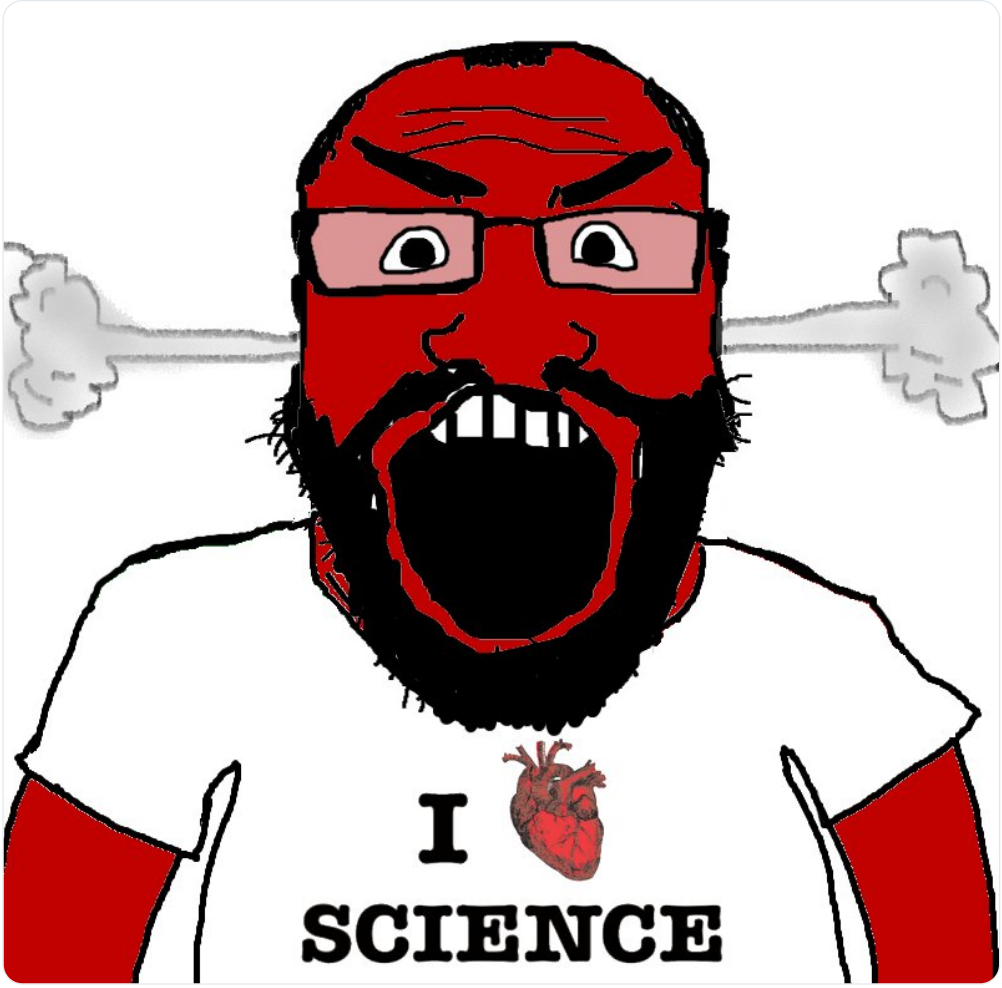
Table 1. A Summary of Meta-Analyses of ESP Studies.

Authors	No. of studies and period of analysis	*Mean* effect size	Stouffer *Z*	*p*
Ganzfeld free response (Bem, Palmer, & Broughton, 2001)	40 (1991-1999)	0.051 ± 0.020	2.49	4.8×10^{-3}
Precognition (Steinkamp, Milton, & Morris, 1998)	22 (1935-1987)	0.0100 ± 0.002	4.78	8.76×10^{-7}
Clairvoyance (Steinkamp et al., 1998)	22 (1935-1997)	0.009 ± 0.003	2.81	2.48×10^{-3}
Standard free response (Storm, Tressoldi, & Di Risio, 2010)	14 (1992-2008)	−0.029 ± 0.013	−2.29	.989
Non-ganzfeld (dream psi, meditation, relaxation, hypnosis) (Storm et al., 2010)	16 (1997-2008)	0.110 ± 0.032	3.35	2.08×10^{-4}
Forced-choice precognition (Honorton & Ferrari, 1989)	309 (1935-1987)	0.0200 ± 0.0018	11.41	6.3×10^{-25}
Forced-choice studies (Storm, Tressoldi, & Di Risio, 2012)	72 (1987-2010)	0.014 ± 0.003	4.86	5.90×10^{-7}
Prestimulus anticipatory physiological response (Mossbridge, Tressoldi, & Utts, 2012)	26 (1978-2010)	0.21 ± 0.04	5.3	5.7×10^{-8}

Note. ESP = extrasensory perception.

Discussing this topic is a taboo -- our entire system is based on several things: stochasticity, indeterminism, the myth of "free will" and most importantly causality.

Of course, the school of Hermes would argue the cause and effect are one, and this is compatible here.



So what does this have to do with what I write, what I seemed to know...?
What if I only knew because I read these things later? Or what if some of my dreams/tweets

that seemed to predict the future (e.g. with Toropets and the window -- a representation of a computer screen)...

were not really predictions but merely a memory of the future -- of me seeing these things in someone else's tweet?

I would be lying if I said this didn't happen to me a lot.
I sometimes completely miss, but the hits are very frequent to the point where I began to trust it.

I also stopped seeing events past the fall of Syria, which I interpreted as meaning the end would be there. But in reality, I stopped looking past that point, I lost interest.
So it wasn't quite the end, simply the end of my role as a news tracking person.

That's why I told you guys, I can't see past this point.

I don't know what happens next. The tape has ran out.

I think Russia will not throw away Syria doing so would well cause Putin to lose his legacy. His party will be history. And Russia will fall. I think they will go in on Syria. To much to lose.

My visions and dreams are now of a strange and beautiful world I've never seen before, never visited before. I don't know what that means. Perhaps I'm going to watch a very good anime

and it will leave a major impact on me?
Or something else. Who knows.

Goodnight oomfies.
